

# ***LABEL APPLICATORS***

***Top ~ Bottom ~ Front ~ Side ~ Corner***

**Conveyor mounted multiple head machines**

**German quality,  
flexible and versatile.**

**Cross web applicator systems**

**Free standing and column mounted**

**Special labelling systems for bottles.**

**Automatic systems,  
up to five in-line heads  
& bottom applicators**

# ELS Labelling Stations

## System integration from design to application

The labelling station *ELS 200-SC* offers a flexible and economic solution for many of the tasks fulfilled by traditional fully automatic labelling machines. The feature of this new compact version is the electronic unit integrated into the labelling station.

The most important functions, as e.g. automatic-on, manual start, printer-on, photoelectric cell balance for labels, setting length of labels, etc. can be controlled directly at the foil keyboard. The 3-digit LED-display shows functions and errors.

Potential free interfaces serve as communications with independent packaging machines. The placement of labels is possible on "time or distance" (option encoder). The microprocessor controlled stepper motor drive can be regulated continuously and permits a dispensing speed of up to 45 m/min.

Powerful printing systems such as thermo / thermo transfer, hot foil, ink jet or stamp type printing systems can be connected without problems to the *ELS 200-SC*.

### Control system for labelling station.

A clear and easy to learn operator display panel. Stored parameter combinations can be recalled any time. Status report and diagnostic functions. End of label-reel alarm to indicate film roll change, information in case of damage of label-strip and missing label. Potential free interfaces for reliable data transfer to other production components.

### The decisive advantage for your production.

Labelling technology from *ELS* offers you more. More flexibility, greater speed and higher reliability in marking and labelling. Different printing systems like rotation printers, hot-foil printers, thermo transfer-printers or ink jet printers from *ELS* allow you reliable and economical coding and marking of products and goods with varying information in a continuous production process.
